Seating is limited.

New York Sea Grant
125 Nassau Hall
Stony Brook University
Stony Brook, NY 11794-5002

Large amounts of nitrogen loads into Long Island Sound and other water bodies can stimulate an excessive growth of plant plankton and macroalgae in a process called eutrophication. A vial used for testing nitrogen levels in Twin Ponds (Part of Phragmites Park), in Centerport, NY. *Photo credit: Ryan Strother, NYSG*
